

## Code Compliance

### Our Experience Ensures Sharon Stairs Meet Performance and Code Compliance

Because each county, state or municipality has the option to adopt a regional building code, or make modifications based on certain code parameters, architects, engineers and building owners must deal with a complex maze of design requirements. Our approach simplifies the design process while helping you successfully comply with various codes and regulations. We study the building code, and their changes, for every region of the U.S.

#### Some of the more important are:

- American Institute of Steel Construction (AISC)
- Americans With Disabilities Act (ADA) (when applicable)
- International Building Code (IBC)
- NFPA 101

#### Important changes in IBC 2009:

- Minimum Egress Width
- Required Areas of Refuge
- Open Risers in Industrial Occupancies
- Handrail Graspability
- Required Locations for Guards
- Guard Opening Limitations
- Luminous Egress Path Markings
